

## (12) INTERNATIONAL APPLICATION PUBLISHED UNDER THE PATENT COOPERATION TREATY (PCT)

(19) World Intellectual Property  
Organization  
International Bureau

(43) International Publication Date  
1 April 2004 (01.04.2004)

PCT

(10) International Publication Number  
**WO 2004/027993 A2**

(51) International Patent Classification<sup>7</sup>: **H03K 17/687**,  
H02M 3/158, 1/00

(21) International Application Number:  
PCT/IB2003/003979

(22) International Filing Date:  
17 September 2003 (17.09.2003)

(25) Filing Language: English

(26) Publication Language: English

(30) Priority Data:  
102 43 885.4 21 September 2002 (21.09.2002) DE

(71) Applicant (for DE only): **PHILIPS INTELLECTUAL  
PROPERTY & STANDARDS GMBH** [DE/DE]; Stein-  
damm 94, 20099 Hamburg (DE).

(71) Applicant (for AM, AT, AZ, BE, BF, BG, BJ, BY, CF, CG,  
CH, CY, CZ, DK, EE, ES, FI, FR, GB, GH, GM, GR, HU,

IE, IT, KE, KG, KZ, LS, LU, MC, MD, MW, MZ, NL, PT,  
RO, RU, SD, SE, SI, SK, SL, SZ, TJ, TM, TR, TZ, UG, ZM,  
ZW only): **KONINKLIJKE PHILIPS ELECTRONICS**  
N.V. [NL/NL]; Gronewoudseweg 1, NL-5621 BA Eind-  
hoven (NL).

(72) Inventors; and

(75) Inventors/Applicants (for US only): **TOLLE**, Tobias,  
Georg [DE/DE]; c/o Philips Intellectual Property &  
Standards GmbH, Weissshausstr. 2, 52066 Aachen (DE).  
**DÜRBAUM**, Thomas [DE/DE]; c/o Philips Intellectual  
Property & Standards GmbH, Weissshausstr. 2, 52066  
Aachen (DE). **ELFERICH**, Reinhold [DE/DE]; c/o  
Philips Intellectual Property & Standards GmbH, Weis-  
shausstr. 2, 52066 Aachen (DE).

(74) Agent: **VOLMER**, Georg; Philips Intellectual Property &  
Standards GmbH, Weissshausstr. 2, 52066 Aachen (DE).

(81) Designated States (national): AE, AG, AL, AM, AT, AU,  
AZ, BA, BB, BG, BR, BY, BZ, CA, CH, CN, CO, CR, CU,

(54) Title: CONVERTER CIRCUIT AND CONTROL METHOD FOR SAME

(57) Abstract: In known converter circuits switching losses occur, which are caused by reverse-recovery currents of a freewheeling diode. To reduce said switching losses it is proposed by the invention to drive the switching elements such that, upon switching from the second to the first switching element, the timing is controlled in such a manner that the shoot through currents and the conduction of the freewheeling diode are kept at a low value or, better still, are precluded. As regards the control mechanism, it is proposed to turn on the first switching element later if shoot through currents occur, and to turn on the first switching element sooner if conduction of the freewheeling diode occurs. Here, a time of overlap may be provided during which both switching elements are simultaneously conducting. For the control mechanism, the voltage across a switching element can be used as a measured input value.
